POWER BI SALES PERFORMANCE REPORT: DATASET 3

Dashboard:

Dashboard Overview:

The Dataset 3 Power BI dashboard presents an executive-level summary of commercial performance, order volume, shipping costs, and customer/employee engagement. Key interactive controls on the page include a multi-year date slicer along with country and product category filters to dynamically analyze performance across operational segments.

KPI and Commercial Performance Analysis:

Metric	Displayed Value	Metric Description
Total Sales	1.27M	Primary revenue performance measure
Total Orders	809	Total volume of completed/processed orders
Total Quantity Sold	51K	Total physical units sold across categories
Number of Customers	91	Unique customer count during the active filter period
Total Freight	63.96K	Total shipping/freight expenditure
Average Freight	79.05	Average freight cost incurred per order

Tooltip:

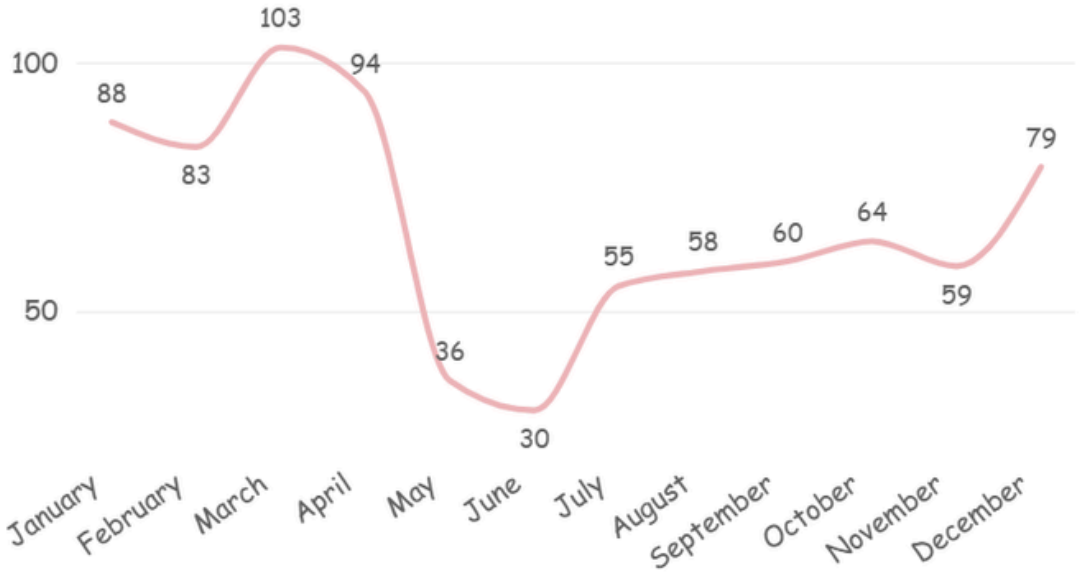

Commercial Reading & Data Caution:

- Commercial Reading: The summary metrics establish a top-line commercial footprint of 1.27M in sales generated from 809 orders and 51K total units, with a customer base of 91 accounts.
- Data Caution: These measures represent gross commercial totals. The dashboard does not report cost of goods sold (COGS), net profit margins, order returns, or transaction-level tax/discounts. Financial profitability should not be inferred without pairing this data with cost and margin metrics.

Total Sales

by categoryName

Sales Mix and Order Trend:

Monthly Order Trend:

Order processing activity follows a distinct trajectory throughout the calendar year:

- Peak Activity: Order volume reaches its highest peak in March.
- Mid-Year Decline: A sharp drop in order volume occurs through May and June.
- End-of-Year Recovery: Order volumes steadily recover from July through December.

Category Sales Mix:

- Top Performers: Beverages and Dairy Products lead total sales volume by a wide margin.
- Mid-Tier Segments: Condiments, Meat & Poultry, and Seafood form the middle revenue tier.
- Lower Trailing Categories: Confections, Produce, and Grains & Cereals represent the lower portion of the sales mix.

productName	categoryName	Total Sales	Total Quantity Sold
Valkoinen suklaa	Confections	3,437.69	235
Uncle Bob's Organic Dried Pears	Produce	22,044.30	763
Tunnbr�d	Grains & Cereals	4,601.70	580
Tourti�re	Meat & Poultry	4,728.24	755
Tofu	Produce	7,991.49	404
Th�ringer Rostbratwurst	Meat & Poultry	80,368.67	746
Teatime Chocolate Biscuits	Confections	5,862.62	723
Tarte au sucre	Confections	47,234.97	1083
Steeleye Stout	Beverages	13,644.00	883
Spegesild	Seafood	5,883.00	548
Sirop d'�rable	Condiments	14,352.60	603
Sir Rodney's Scones	Confections	9,104.00	1016
Sir Rodney's Marmalade	Confections	22,563.36	313
Singaporean Hokkien Fried Mee	Grains & Cereals	8,575.00	697
Scottish Longbreads	Confections	8,714.00	799
Schoggi Schokolade	Confections	15,099.88	365
Sasquatch Ale	Beverages	6,350.40	506
R�ssle Sauerkraut	Produce	25,696.64	640
Rogede sild	Seafood	4,338.18	508
Rh�nbr�u Klosterbier	Beverages	8,177.49	1155
R�d Kaviar	Seafood	3,997.20	293
Ravioli Angelo	Grains & Cereals	7,661.55	434
Raclette Courdavault	Dairy Products	71,155.70	1496
Queso Manchego La Pastora	Dairy Products	12,257.66	344
Queso Cabrales	Dairy Products	12,901.77	706
P�t� chinois	Meat & Poultry	17,426.40	903
Perth Pasties	Meat & Poultry	20,574.17	722
Pavlova	Confections	17,215.78	1158
Total		12,65,793.04	51317

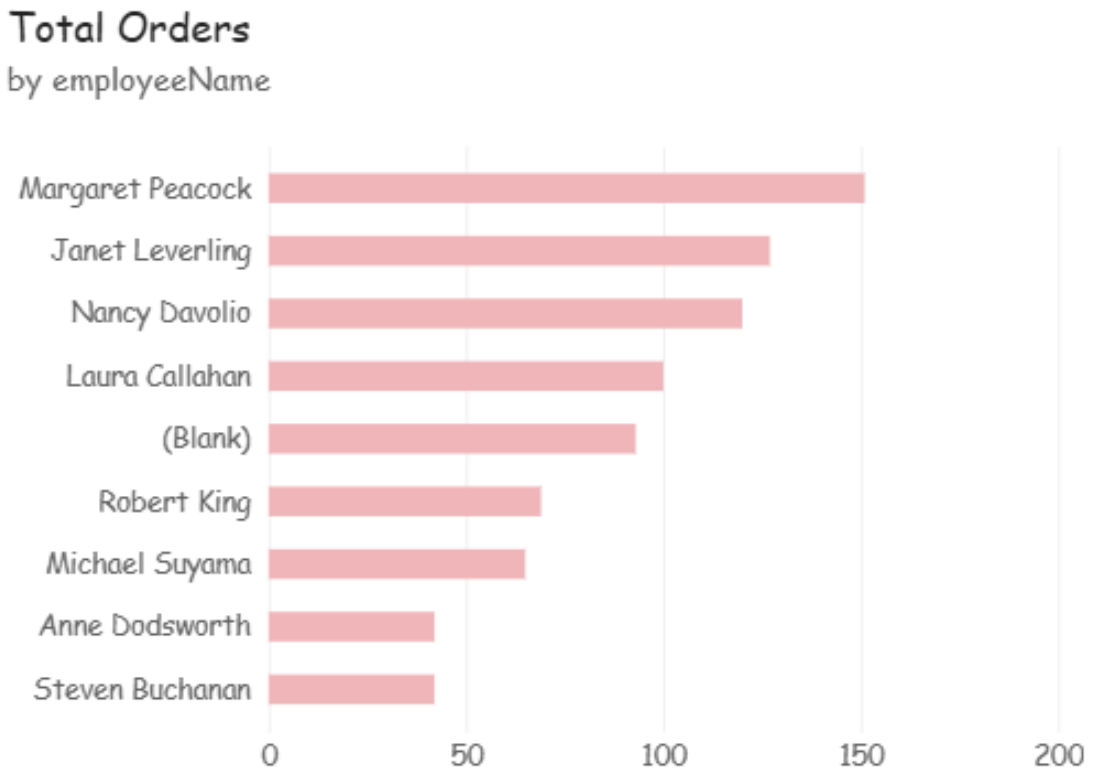

Product-Level Performance:

The dataset table contains detail records for product names, product categories, total sales, and total units sold. While useful for item-level inspection, complete rankings should be verified directly within Power BI when filtering across specific sub-categories.

Employee Sales Contribution:

- Top Sales Contributor: Margaret Peacock generated the highest number of total orders.
- Secondary Contributors: Janet Leverling and Nancy Davolio follow as top-performing account representatives.
- Data Quality Note: The employee hierarchy contains a "(Blank)" record entry. This indicates missing employee attribution on certain sales records and requires data remediation.

Business Insights and Recommendations

Investigate Mid-Year Order Slump:
Conduct an operational review of May and June order drops to evaluate whether the decline stems from stockouts, supply chain delays, or recurring seasonal demand trends.

Resolve Data Quality Issues:
Cleanse unassigned sales records logged under the (Blank) employee category to ensure accurate commission reporting and performance tracking.

Focus Marketing on Core Revenue Drivers:
Capitalize on high-performing product lines (Beverages and Dairy) for cross-selling opportunities with trailing product lines like Grains & Cereals.

Integrate Margin & Profitability Metrics:
Expand Dataset 3 to include unit costs, discounts, and return rates before finalizing pricing strategies or profitability analyses.

Conclusion and Data Notes:

Conclusion: Dataset 3 provides a consolidated view of commercial activity, confirming 1.27M in revenue across 809 orders and 91 customers. The current views effectively support trend monitoring and performance categorization.

Data Notes: Values and figures are derived from the Power BI Dataset 3 models and dashboard outputs. Applied filters (such as date ranges or specific regions) dynamically adjust these totals. Profitability and net margin analyses require supplemental cost tables.
